## Chapter 18

## Financial Modeling and Pro Forma Analysis Forecasting Financial Statements

| Income Statement |  | Balance Sheet |  |
| :--- | :---: | :--- | ---: |
| Sales | 200,000 | Assets |  |
| Costs Except Depr. | $(100,000)$ | Cash and Equivalents | 15,000 |
| EBITDA | 100,000 | Accounts Receivable | 2,000 |
| Depreciation | $(6,000)$ | Inventories | 4,000 |
| EBIT | 94,000 | Total Current Assets | 21,000 |
| Interest Expense (net) | $(400)$ | Property, Plant, and Equipment | 10,000 |
| Pretax Income | 93,600 | Total Assets | 31,000 |
| Income Tax | $(32,760)$ | Liabilities and Equity |  |
| Net Income | 60,840 | Accounts Payable | 1,500 |
|  |  | Debt | 4,000 |
|  |  | Total Liabilities | 5,500 |
|  |  | Stockholders ${ }^{\prime}$ Equity | 25,500 |
|  |  | Total Liabilities and Equity | 31,000 |

18.4 Jim's expects sales to grow by $10 \%$ next year. Using the percent of sales method, forecast:
a. Costs (excluding depreciation).
b. Depreciation.
c. Net income.
d. Cash.
e. Accounts Receivable.
f. Inventory.
g. Property, plant, and equipment.

Use the percentage of sales method to forecast the financial line items identified in the problem.
Forecasted sales $=200,000 \times(1.10)=220,000$
Forecasted value $=$ current percent of sales $\times$ forecasted sales.

|  | Current Percent of Sales | Forecasted |
| :--- | :---: | ---: |
| a. Costs | $50.00 \%$ | $\$ 110,000$ |
| b. Depreciation | $3.00 \%$ | $\$ 6,600$ |
| c. Net Income | $30.42 \%$ | $\$ 66,924^{1}$ |
| d. Cash | $7.50 \%$ | $\$ 16,500$ |
| e. Accounts Receivable | $1.00 \%$ | $\$ 2,200$ |
| f. Inventory | $2.00 \%$ | $\$ 4,400$ |
| g. Property, Plant, and Equipment | $5.00 \%$ | $\$ 11,000$ |

[^0]18.5 Assume that Jim's pays out $90 \%$ of its net income. Use the percent of sales method to forecast:
a. Stockholders' equity.
b. Accounts Payable.

Use the percentage of sales method to forecast next year's stockholder's equity and accounts payable.
a. For shareholder's equity, we need to know how much will be added to shareholder equity from net income. Additions to shareholder equity $=66,924 \times(1-0.90)=6,692$., assuming that Net Income is gpoing to be 66,924 .

$$
\text { New shareholder equity }=25,500+6,692=32,192
$$

Note: In this question we are using the assumption above, that NI is a fixed percentage of Sales. But in Problem 18.6 we will understand that this assumption would be unrealistic.
b. Current percent of sales: $0.75 \%$. Forecasted accounts payable $=0.75 \% \times 220,000=$ 1,650.
Stockholders' equity will grow by $\$ 6,692$ (which is the amount of earnings retained in the business) to $\$ 32,192$, if we considered Net Income to be 66,924 .
Accounts payable are forecasted to grow to $\$ 1,650$.

### 18.6 What is the amount of net new financing needed for Jim's?

Calculate Jim's net new financing for next year.
Pro forma financial statements for Jim's Espresso:

| Income Statement |  | Balance Sheet |  |  |  |  |
| :--- | :---: | :--- | ---: | :---: | :---: | :---: |
| Sales | 220,000 | Assets |  |  |  |  |
| Costs Except Depr. | $(110,000)$ | Cash and Equivalents | 16,500 |  |  |  |
| EBITDA | 110,000 | Accounts Receivable | 2,200 |  |  |  |
| Depreciation | $(6,600)$ | Inventories | 4,400 |  |  |  |
| EBIT | 103,400 | Total Current Assets | 23,100 |  |  |  |
| Interest Expense (net) | $(400)$ | Property, Plant, and Equipment | 11,000 |  |  |  |
| Pretax Income | 103,000 | Total Assets | 34,100 |  |  |  |
| Income Tax (35\%) | $(36,050)$ | Liabilities and Equity |  |  |  |  |
| Net Income | $\mathbf{6 6 , 9 5 0}$ | Accounts Payable | 1,650 |  |  |  |
|  |  | Debt | 4,000 |  |  |  |
|  |  | Total Liabilities | 5,650 |  |  |  |
|  |  | Stockholders' Equity | $\mathbf{3 2 , 1 9 5}$ |  |  |  |
|  |  | Total Liabilities and Equity | 37,845 |  |  |  |

[^1]Total new financing required $=$ Total assets - total liabilities and equity $=-3,745$.
Jim has excess financing, which means it can use the excess financing to repay debt or pay a dividend to shareholders.

Notice the (small) difference from problem 18.5 to18.6, by changing the way in which we are forecasting net income.

### 18.7 If Jim's adjusts its payout policy to $\mathbf{7 0 \%}$ of net income, how will the net new financing change?

By reducing its payout ratio, it will increase retained earnings, which are added to stockholders' equity. That additional stockholders' equity will reduce the required new financing.
For stockholders' equity, we need to know how much will be added to stockholder equity from net income. Additions to stockholder equity $=66,950 \times(1-0.70)=20,085$. . Compared to the $90 \%$ payout ratio, these additions are $20,085-6,695=13,390$ more, so net new financing required will be $\$ 13,390$ less.
By reducing its payout ratio, Jim's will not need to secure as much external financing to fund its growth.

## Forecasting a Planned Expansion

Use the following Income Statement and Balance Sheet for KMS for Problems 12-15
(and remember the slides from the lectures and the example in this chapter of the textbook:

| $\mathbf{1}$ | Year | $\mathbf{2 0 1 3}$ | \% of Sales |
| ---: | :--- | ---: | :---: |
| $\mathbf{2}$ | Income Statement (\$000s) |  |  |
| $\mathbf{3}$ | Sales | 74,889 | $100 \%$ |
| $\mathbf{4}$ | Costs Except Depreciation | $-58,413$ | $78 \%$ |
| $\mathbf{5}$ | EBITDA | 16,476 | $22 \%$ |
| $\mathbf{6}$ | Depreciation | $-5,492$ | $7.333 \%$ |
| $\mathbf{7}$ | EBIT | 10,984 | $15 \%$ |
| $\mathbf{8}$ | Interest Expense (net) | -306 | $\mathbf{N M}^{\star}$ |
| $\mathbf{9}$ | Pretax Income | 10,678 | $\mathbf{1 4 \%}$ |
| $\mathbf{1 0}$ | Income Tax (35\%) | $-3,737$ | NM |
| $\mathbf{1 1}$ | Net Income | 6,941 | $\mathbf{9} \%$ |

*NM indicates representing the item as a percent of sales is not meaningful.

| $\mathbf{1}$ | Year | $\mathbf{2 0 1 3}$ | \% of Sales |
| ---: | :--- | :---: | :---: |
| $\mathbf{2}$ | Balance Sheet (\$000s) |  |  |
| $\mathbf{3}$ | Assets |  |  |
| $\mathbf{4}$ | Cash and Equivalents | 11,982 | $16 \%$ |
| $\mathbf{5}$ | Accounts Receivable | 14,229 | $19 \%$ |
| $\mathbf{6}$ | Inventories | 41,978 | $20 \%$ |
| $\mathbf{7}$ | Total Current Assets | 49,427 | $55 \%$ |
| $\mathbf{8}$ | Property, Plant, and Equipment | 90,616 | $121 \%$ |
| $\mathbf{9}$ | Total Assets |  |  |
| $\mathbf{1 0}$ | Liabilities and Stockholders' Equity |  |  |
| $\mathbf{1 1}$ | Accounts Payable | 4,500 | $\mathbf{N M}$ |
| $\mathbf{1 2}$ | Debt | 16,482 | NM |
| $\mathbf{1 3}$ | Total Liabilities | 74,134 | NM |
| $\mathbf{1 4}$ | Stockholders' Equity | 90,616 | $121 \%$ |
| $\mathbf{1 5}$ | Total Liabilities and Equity |  |  |

18.12 Assume that KMS's market share will increase by $0.25 \%$ per year rather than the $1 \%$ used in the chapter (see Table 18.5) and that its prices remain as in the chapter. What production will KMS require each year? When will an expansion become necessary (that is, when will production volume exceed 1100)?

Compute production volumes under the revised growth assumptions.

|  | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Production Volume (000 units) |  |  |  |  |  |  |
| Market Size | 10,000 | 10,500 | 11,025 | 11,576 | 12,155 | 12,763 |
| Market Share | $10.00 \%$ | $10.25 \%$ | $10.50 \%$ | $10.75 \%$ | $11.00 \%$ | $11.25 \%$ |
| Production Volume | $\mathbf{1 , 0 0 0}$ | $\mathbf{1 , 0 7 6}$ | $\mathbf{1 , 1 5 8}$ | $\mathbf{1 , 2 4 4}$ | $\mathbf{1 , 3 3 7}$ | $\mathbf{1 , 4 3 6}$ |

In 2015 , production will exceed 11,000 units, and production capacity will have to be increased.
18.13 Under the assumption that KMS's market share will increase by $0.25 \%$ per year, you determine that the plant will require an expansion in 2015. The expansion will cost $\$ 20$ million. Assuming that the financing of the expansion will be delayed accordingly, calculate the projected interest payments (assuming that KMS still uses a 10-year bond and interest rates remain the same as in the chapter) through 2018.

Calculate financing needs, interest payments (and interest tax shields) as KMS grows.

|  | $\mathbf{2 0 1 3}$ | $\mathbf{2 0 1 4}$ | $\mathbf{2 0 1 5}$ | $\mathbf{2 0 1 6}$ | $\mathbf{2 0 1 7}$ | $\mathbf{2 0 1 8}$ |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
| Debt and Interest Table (\$000s) |  |  |  |  |  |  |
| $\quad$ Outstanding Debt | 4,500 | 4,500 | 4,500 | 24,500 | 24,500 | 24,500 |
| New Net Borrowing |  |  | 20,000 |  |  |  |
| Interest on Debt | $\mathbf{3 0 6}$ | $\mathbf{3 0 6}$ | $\mathbf{3 0 6}$ | $\mathbf{1 , 6 6 6}$ | $\mathbf{1 , 6 6 6}$ | $\mathbf{1 , 6 6 6}$ |
| Interest Tax Shield | $\mathbf{1 0 7}$ | $\mathbf{1 0 7}$ | $\mathbf{1 0 7}$ | $\mathbf{5 8 3}$ | $\mathbf{5 8 3}$ | $\mathbf{5 8 3}$ |

The increase in production capacity in 2015 will require KMS to issue $\$ 20,000$ in new debt financing. This will increase the amount of annual interest KMS must pay (and the amount of the interest tax shield.)
18.14 Under the assumption that KMS's market share will increase by $0.25 \%$ per year (and the investment and financing will be adjusted as described in Problem 13), you project the following depreciation:

| Year | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Depreciation | 5,492 | 5,443 | 7,398 | 7,459 | 7,513 | 7,561 |

Using this information, project net income through 2018 (that is, reproduce Table 18.8 under the new assumptions.

Reproduce Table 18.8 under the new assumptions.
$\left.\begin{array}{lcccccc}\hline & & \mathbf{2 0 1 3} & \mathbf{2 0 1 4} & \mathbf{2 0 1 5} & \mathbf{2 0 1 6} & \mathbf{2 0 1 7} \\ \hline \text { Income Statement }(\$ 000 s) & & & & \mathbf{2 0 1 8} \\ 1 & \text { Sales } & 74,890 & 82,344 & 90,341 & 99,056 & 108,555 \\ 2 & \text { Cost of Goods Sold } & (58,414) & (64,228) & (70,466) & (77,264) & (84,673)\end{array}\right)(92,755)$

Note that net income is forecasted to decline from 2014 to 2015 as the new production capacity, with its related increase in depreciation expense, come on line.
18.15 Assuming that KMS's market share will increase by $0.25 \%$ per year (implying that the investment, financing, and depreciation will be adjusted as described in problems 13 and 14), and that the working capital assumptions used in the chapter still hold, calculate KMS's working capital requirements through 2018 (that is, reproduce Table 18.9 under the new assumptions).

Calculate KHS's working capital requirements through 2018.

|  | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Working Capital (\$000s) |  |  |  |  |  |  |
| Assets |  |  |  |  |  |  |
| 1 Accounts Receivable | 14,229 | 15,645 | 17,165 | 18,821 | 20,625 | 22,594 |
| 2 Inventory | 14,978 | 16,469 | 18,068 | 19,811 | 21,711 | 23,783 |
| 3 Cash | 11,982 | 13,175 | 14,455 | 15,849 | 17,369 | 19,027 |
| 4 Total Current Assets | 41,190 | 45,289 | 49,688 | 54,481 | 59,705 | 65,404 |
|  | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 |
| Liabilities |  |  |  |  |  |  |
| 5 Accounts Payable | 11,982 | 13,175 | 14,455 | 15,849 | 17,369 | 19,027 |
| 6 Total Current Liabilities | 11,982 | 13,175 | 14,455 | 15,849 | 17,369 | 19,027 |
| Net Working Capital |  |  |  |  |  |  |
| 7 Net Working Capital | 29,207 | 32,114 | 35,233 | 38,632 | 42,336 | 46,377 |
| 8 Increase in Net Working Capital |  | 2,907 | 3,119 | 3,399 | 3,705 | 4,041 |

Net working capital is forecasted to grow continually through 2018.
Forecast KMS's free cash flows (reproduce Table 18.13), assuming KMS's market share will increase by $0.25 \%$ per year; investment, financing, and depreciation will be adjusted accordingly; and working capital will be as you projected in Problem 15.

Calculate KMS's free cash flow through 2018.

|  |  | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Free Cash Flow (\$000s) |  |  |  |  |  |  |  |
| 1 | Net Income | 6,941 | 8,038 | 7,911 | 8,234 | 9,557 | 11,007 |
| 2 | Plus: After-Tax Interest Expense | 199 | 199 | 199 | 1,083 | 1,083 | 1,083 |
| 3 | EBIT (1-Tc) | 7,139 | 8,237 | 8,110 | 9,317 | 10,640 | 12,090 |
| 4 | Plus: Depreciation | 5,492 | 5,443 | 7,398 | 7,459 | 7,513 | 7,561 |
| 5 | Less: Increases in NWC | 0 | $(2,907)$ | $(3,119)$ | $(3,399)$ | $(3,705)$ | $(4,041)$ |
| 6 | Less: Capital Expenditures | $(5,000)$ | $(5,000)$ | $(28,000)$ | $(8,000)$ | $(8,000)$ | $(8,000)$ |
| 7 | Free Cash Flow of Firm | 7,631 | 5,773 | $(15,611)$ | 5,377 | 6,448 | 7,611 |

KMS should generate positive free cash flow in each year except 2015. 2015 is the year that KMS must expand production capacity and that will require a large increase in capital expenditures.

[^0]:    ${ }^{1}$ Note: It is highly questionable to assume Net Income will be a fixed percentage of sales. We use this for part 18.5, but in problem 18.6 we drop this assumption and do it better.

[^1]:    ${ }^{2} 32,195=25,500+0,1 * 66,950=25,500+6,695$.
