OPEN CV

2021

Agenda

- Open CV
- Read and save
- Image resize
- Split and Merge images
- Add Images
- Rotate
- ROI

OpenCV

1. Import Library

```
[2]: ➜ import cv2
```

2. Read, write and display images

```
[3]: ➜ # Read  
      my_image = cv2.imread('image01.png')  
      # Write  
      cv2.imwrite('image01a.png', my_image)
```

Out[3]: True

```
[4]: ➜ type(my_image)
```

Out[4]: numpy.ndarray

```
[5]: ➜ my_image.shape
```

Out[5]: (779, 1383, 3)

Read from URL

```
import cv2
import urllib.request as req
import numpy as np

req = req.urlopen('https://carlosjcosta.files.wordpress.com/2015/02/cropped-fundo.jpg')
arr = np.asarray(bytearray(req.read()), dtype=np.uint8)
image_1 = cv2.imdecode(arr, -1)

plt.imshow(image_1)
plt.show()
```

```
# Display image
cv2.imshow("my_image",my_image)
cv2.waitKey(0) # Wait for the user to press a key before continuing
cv2.destroyAllWindows()
```

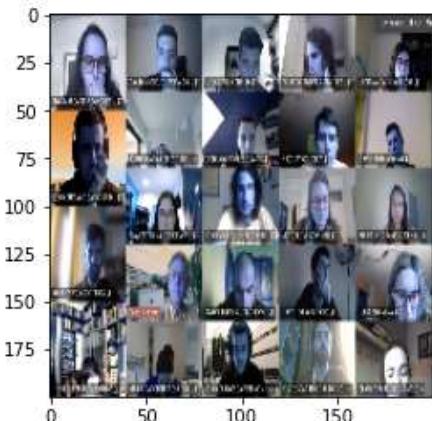

```
# Display images using matplotlib
import matplotlib.pyplot as plt
plt.imshow(my_image)
plt.show()
```

3. Resize image

```
[23]: # Resize image  
# cv2.resize(src, dsize, fx, fy)  
# dsize is a tuple  
new_image = cv2.resize(my_image, (200,200))
```

```
[24]: plt.imshow(new_image)  
plt.show()
```

```
[25]: # Resize image  
new_image = cv2.resize(my_image, None, fx=0.7, fy=0.7)
```

```
[26]: # Scale up/expand both width and height by factor of 2  
result_1 = cv2.resize(my_image, None, fx=2, fy=2, interpolation=cv2.INTER_CUBIC)  
  
# Scale down/shrink both width and height by factor of 2  
result_2 = cv2.resize(my_image, None, fx=2, fy=2, interpolation=cv2.INTER_AREA)
```

4. Conversion image

```
# Converts an image from one color space to another.  
# cv2.cvtColor(src, type)  
# type:  
# cv2.COLOR_BGR2GRAY  
# cv2.COLOR_GRAY2BGR  
# cv2.COLOR_BGR2RGB  
  
type=cv2.COLOR_BGR2GRAY  
new_image = cv2.cvtColor(my_image, type)
```

Split and Merge Image Channels

```
▶ import cv2
import numpy as np
img = cv2.imread('image01a.png')
b,g,r = cv2.split(img)
```

```
▶ cv2.imshow("b_image",b)
cv2.waitKey(0)
```

8]: -1

```
▶ cv2.imshow("g_image",g)
cv2.waitKey(0)
```

9]: -1

```
▶ cv2.imshow("r_image",r)
cv2.waitKey(0)
cv2.destroyAllWindows()
```

2]: -1

```
▶ imag=cv2.merge((b,r,g ))
```

```
▶ cv2.imshow("merged_image",imag)
cv2.waitKey(0)
```

5. Adding Images

https://docs.opencv.org/master/dd/d4d/tutorial_js_image_arithmetics.html

https://docs.opencv.org/master/d0/d86/tutorial_py_image_arithmetics.html

```
# Sum Images
# Sum the two image arrays for all channels
# Read in the two images

image_1 = cv2.imread('image01a.jpg')
image_2 = cv2.imread('image02a.jpg')

result = cv2.add(image_1, image_2)

cv2.imshow('result', result)
cv2.waitKey(0)
cv2.destroyAllWindows()
```

```
# Sum Images
image_1 = cv2.imread('image01a.jpg')
image_2 = cv2.imread('image02a.jpg')

result = cv2.addWeighted(image_1, 0.1, image_2, 0.9, 0)

cv2.imshow('result', result)
cv2.waitKey(0) # Wait for the user to press a key before continuing
cv2.destroyAllWindows()
```

6. Filtering Images

```
► # Filter by passing image through 3x3 averaging filter  
# average_image  
new_image= cv2.blur(image_1, (3,3))
```

```
► # Apply 3x3 gaussian filter on the original image  
# gaussian_image  
new_image = cv2.GaussianBlur(image_1, (3,3),0)
```

```
► # Apply 3x3 median filter on the original image  
# median_image  
new_image = cv2.medianBlur(image_1,3)
```

```
► import matplotlib.pyplot as plt  
  
plt.imshow(new_image)  
plt.show()
```

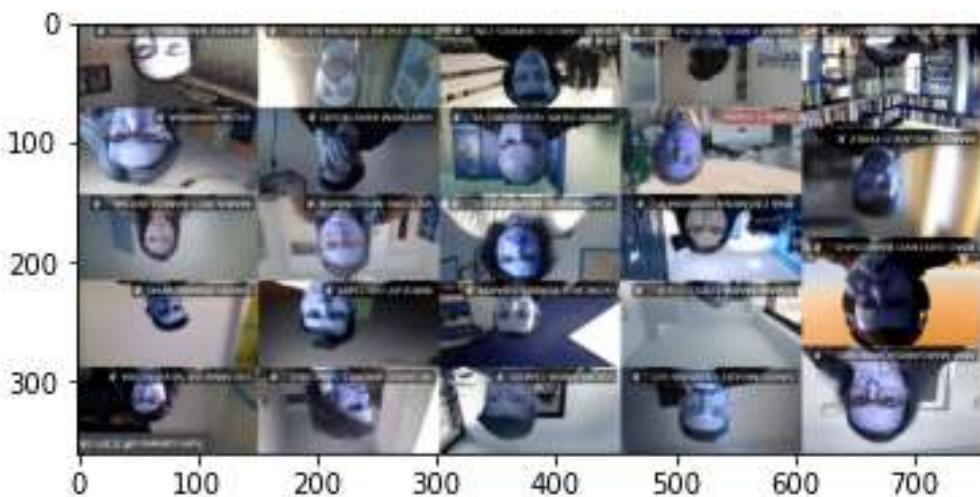

7. Rotate

```
image = cv2.imread('image01a.jpg',0)

# Rows and columns
rows, cols = image.shape

matrix = cv2.getRotationMatrix2D((cols/2,rows/2), 180, 1)
result = cv2.warpAffine(image_1,matrix, (cols,rows))

# Display resulting rotation
plt.imshow(result)
plt.show()
```

ROI

```
imag_ROI = image_1[300:400, 400:500]  
  
plt.imshow(imag_ROI)  
plt.show()
```

Conclusions

- Open CV
- Read and save
- Image resize
- Split and Merge images
- Add Images
- Rotate
- ROI
