

ECONOMIC AND BUSINESS HISTORY 25/26

LECTURE 10 – FROM DEGLOBALIZATION TO DEPRESSION

PLAN

1. Winner's Curse

2. Crash

3. Great Depression

1. Winner's Curse

WHO WON WWI?

Shares of the World Industrial Output (1913 and 1926-9)

	USA	Germ	GB	France	Russia/ URSS	Sweden	Japan	India	Rest of the W
1913	35,8	14,3	14,1	7,0	4,4	1,0	1,2	1,1	21,1
1926-9	42,2	11,6	9,4	6,6	4,3	1,0	2,5	1,2	21,2

Kenwood e Loughheed 1999: 173.

The Spoils of Victory

- Germany sells capital goods (locomotives, trains, ships) and stocks (incl. German-financed US railway companies) to the US in order to obtain dollars to pay for the Reparations imposed in 1919.
- In 1917, the confiscation of all 5,000 German patents and their compulsory licensing (e.g., Aspirine) transferred the technological edge in chemistry and steel sectors from Germany to the US
- Also, governments (not so much firms) sought US capital markets for financing
- Financial and physical now capital abundant in the US

Large Firms

- Capital stocks and the conquest of markets lost by the Europeans contribute to enlarge the firms
- The US vast internal market, as well as a large amount of wealthy consumers meant that size was an advantage
- Assembly lines and other efficiency-enhancing technologies (pre- and post-1918) contribute to the rise of the large firms, like Ford and GM

5 th	306,3	801,1	101,0	290,6	53,3	100,2
25 th	143,3	308,5	28,8	58,8	18,6	25,7
50 th	90,3	174,7	17,7	33,5	9,8	15,6
100 th	43,6	80,1	9,3	16,5	5,6	8,9
200 th	24,4	36,1	4,4	6,3	3,0	3,8

Domestic Economy: firms and market

- Despite the emergence of large firms, US market remained competitive
- Especially, because of US gov regulation issued in the late 19th cent, to prevent the firms' "coordination strategies" :
 - CARTEL – price setting agreements, by competitors
 - TRUST – union of competing businesses and creation of a mother company, owned in shares by the older owner (Trustees)
 - Nevertheless, Prevalence of large firms with good access to the capital markets leads to the spread of :
 - HOLDINGS – business created to control other businesses and groups of businesses

Domestic Economy: families

- With WWI, USA received more physical and financial capital and its vast increases in productivity allowed vast market segment to emulate the high class of the *Belle Époque*
 - High-tech durables, like cars and domestic appliances (iron, radio, toaster, fridge...) became mass-consumption items

The *Roaring Twenties*

For the others: the Spoils of Defeat

- The great sacrifices demanded from the working class and from women during WWI made **universal** (all men, regardless of status, and also all women) **voting** inevitable
- This meant a shift from capital-friendly to labour-friendly institutions
- Concerns with unemployment led countries to become protectionist
- Also, state budgets became larger and more redistributive (pensions, war debts, state-owned firms)

2. Crash

The Roaring 20s were great for the US, right?

- Yes, but ...
 - With WWI-induced protectionism, the US was 'leading alone'
 - Worker-influenced European govs try to protect jobs
 - Also, the world retaliates on US 'unfair' competition (USA continued to be strongly protectionist, even after 1918, when it had clear comparative advantages in many fields)
 - Non-US firms adapted to domestic, not foreign, demand and hence not as innovative as before
 - MOST OF ALL, Fast growth ► high savings ► low return rates!!!
 - In the 1st Globalization, this led to the outflow of capitals to capital-poor countries

Deglobalization in the World Capital Markets

- Without Globalization,
- With WWI, USA became a creditor nation and its capital market became the most important in the world
 - European stock and fixed capital -> productivity growth -> high growth rates
 - Abundant (but country-tied) capital -> low return rates from investment

Deglobalization and the 1929 Crash

- There was a brief period of re-globalization from 1925 to 1928 (with American investment in S America and Central Europe)
- However, giving in to pressures from the American banks, in 1928 the American FED suddenly RAISED its discount rate and LIMITED outward capital flows
- US capital-owners did not export their capital and, instead, brought it back from European and S American countries
- This led to a BUBBLE in the US capital market, invaded a glut of returning capital (not to mention industrial crises in Europe, notably Germany...)

Post-1929 Financial Collapse

This bubble popped in October 1929
(Black Thursday 24; Black Tuesday 29)

- *Crash* led to the public suspicion regarding banks
- Frequent “Bank Runs” followed
 - Broken banks 1929-22 (c. 6000; c. 25% of existing)

What were the consequences?

3. Great Depression

Fonte: Bernanke, 1983.

From Bank Runs to the GD

- Bank Runs severed the link between savings and investment
- As banks try to keep liquidity, they limit loans, starving companies of capital
- As investment faltered, jobs were destroyed and did not hire

GD in the US

Abrupt, deep and long recession in 1930-33

High unemployment

Even the recovery of the GDP (complete by 1936) did not eliminate unemployment

Low expectations:

- Consumers
- investors

Ano	FED Discount Rates	GDP growth	Unemployment rate
1928	4,2	1,1	4,4
1929	4,8	6,1	3,2
1930	3,9	-8,9	8,7
1931	2,9	-7,7	15,9
1932	3,5	-1,3	23,6
1933	3,8	-2,1	24,9
1934	2,1	7,7	21,7
1935	2,0	7,6	20,1
1936	2,0	14,2	16,9
1937	1,8	4,3	14,3
1938	1,5	-4,0	19,0
1939	1,5	8,0	17,2
1940	1,5	7,7	14,6
1941	1,5	18,2	9,9

Unemployment and high interest rates increase negative expectations

And the initial US response to the GD was ...

more protectionism !

US Congress tried to protect American agriculture with higher tariffs (*Smoot-Hawley* 1930 tariff that was being discussed in ... September 1929)

US government approves Fresh limits for capital outflows

Understandably, new restrictions on immigration

The main negative effect of protectionism was the political impact

- Other countries retaliated and increased their tariffs and approved more restrictions on American products (thus hurting American exports)

World Spread of the GD (trade)

As the US adopted a protectionist policy to protect domestic employment, countries retaliated

- Wave of tariff increases (that aggravated the WWI-era increases)

The result is further Deglobalization and less exploitation of comparative advantages

Political and Social concerns, rather than economic efficiency

Table 2. – International Tariff Levels

Country	Average Ad Valorem Equivalent Tariffs	
	1920–1929	1930–1940
United States		
Total imports	13.0	16.6
Dutiable imports	35.1	44.5
Other countries		
Trade-Weighted Average	9.9	19.9
Canada	13.4	15.2
France	7.1	21.0
Germany	7.2	26.1
Italy	4.5	16.8
United Kingdom	9.8	23.2

World Spread of the GD (finance)

As the US controlled its capital outflows, countries had little to benefit from keeping the gold standard

All countries abandoned gold in 1933

Devaluations everywhere, increasing exchange rate risk and protectionism

The result was further Deglobalization

Non-capitalist economies, however, seemed to be immune to this

Distribution of the World Industrial Output in 1913 and 1926-9 (%)

	1913	1926-9	1936-8
USA	35,8	42,2	32,3
Germany	14,3	11,6	10,7
GB	14,1	9,4	9,2
France	7,0	6,6	4,5
URSS	4,4*	4,3	18,5
Sweden	1,0	1,0	1,3
Japan	1,2	2,5	3,5
India	1,1	1,2	1,4
Rest	21,1	21,2	18,7
