Cadeias de Valor Globais

- Direção Geral das Atividades Económicas da República Portuguesa:
“conjunto de atividades interligadas, divididas entre várias empresas, em diferentes locais geográficos, com vista à produção de mercadorias e serviços; assume um cariz internacional quando a sua expansão atinge um nível de diversidade global.”

FIGURE 1-1

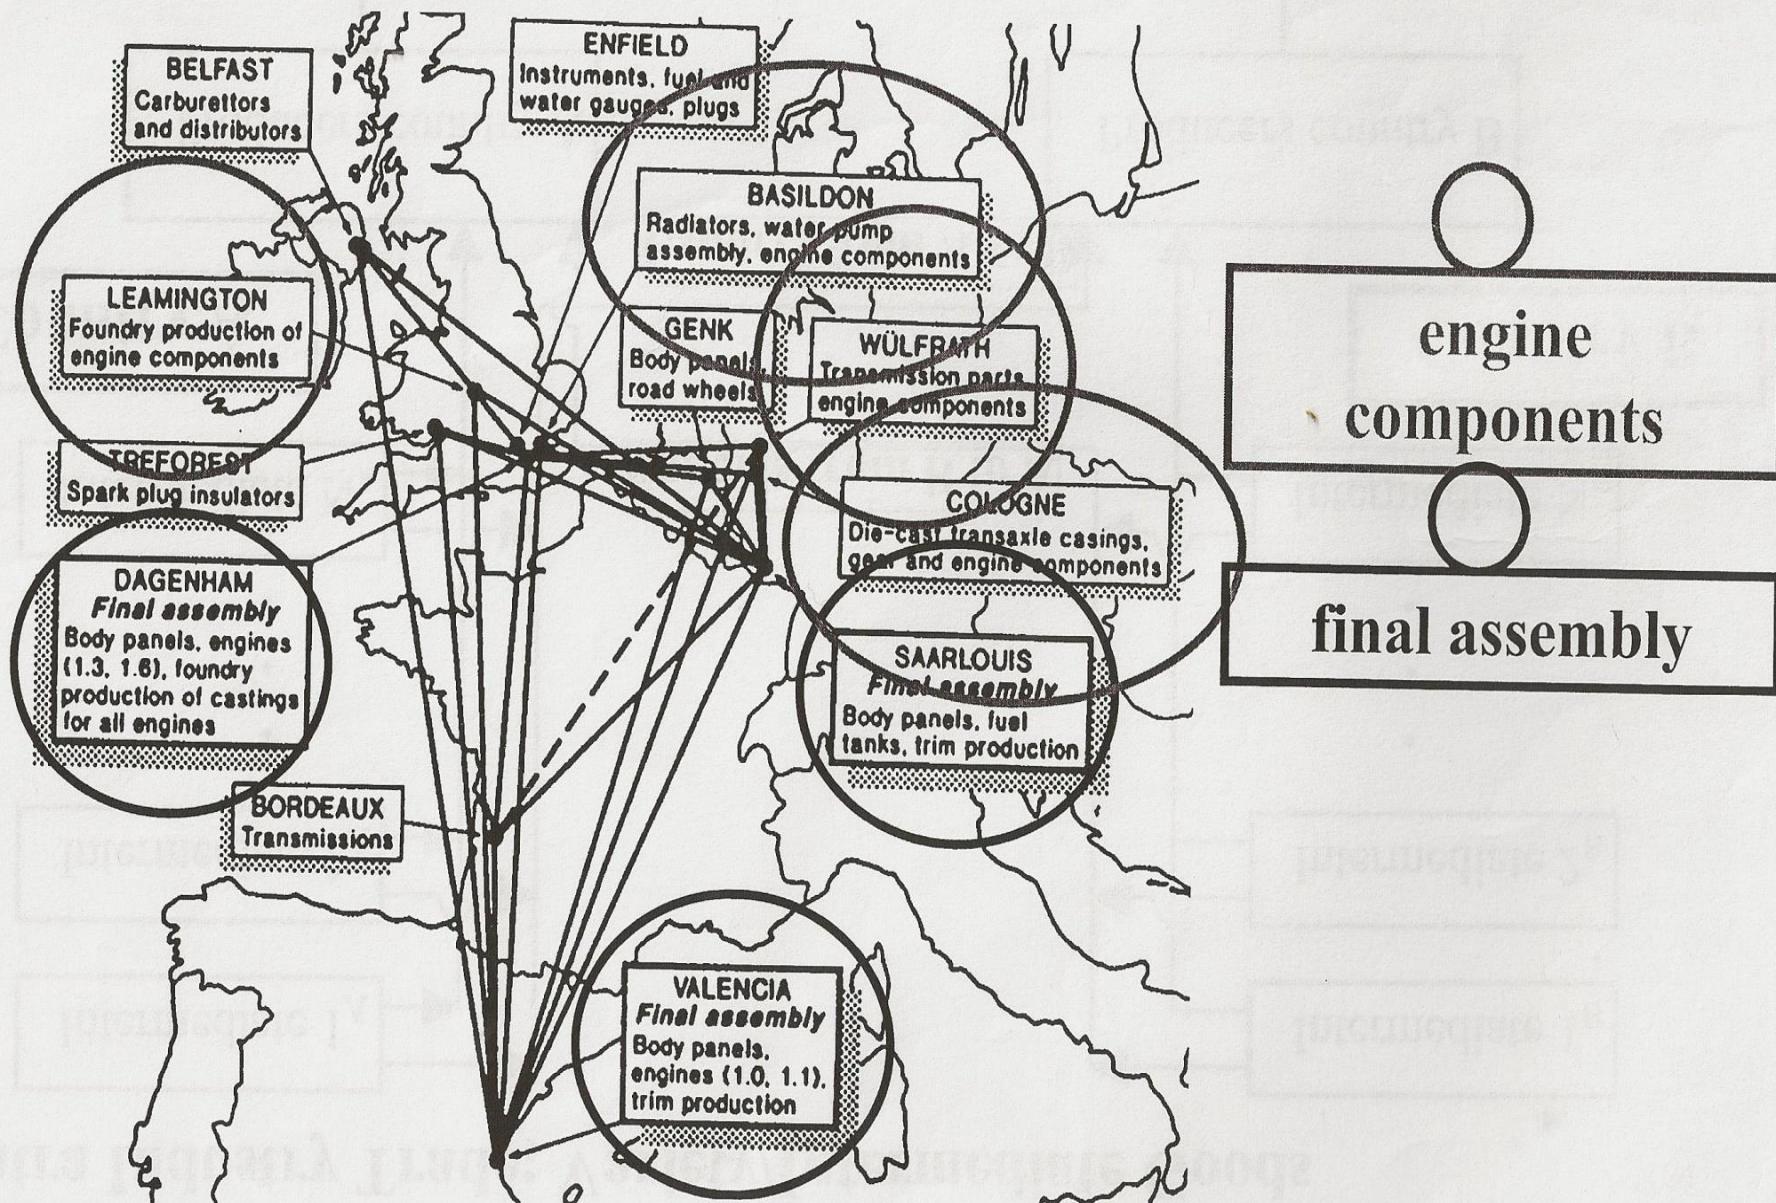

Barbie Doll Shown here are the products supplied by various countries for the manufacture of a Barbie doll, sold in the United States. China provides labor, cotton, and clothing for the doll. Saudi Arabia

Taiwan uses the ethylene to produce vinyl plastic pellets that become Barbie's body, and Japan supplies her nylon hair. The United States provides paints and packaging materials for retailing.

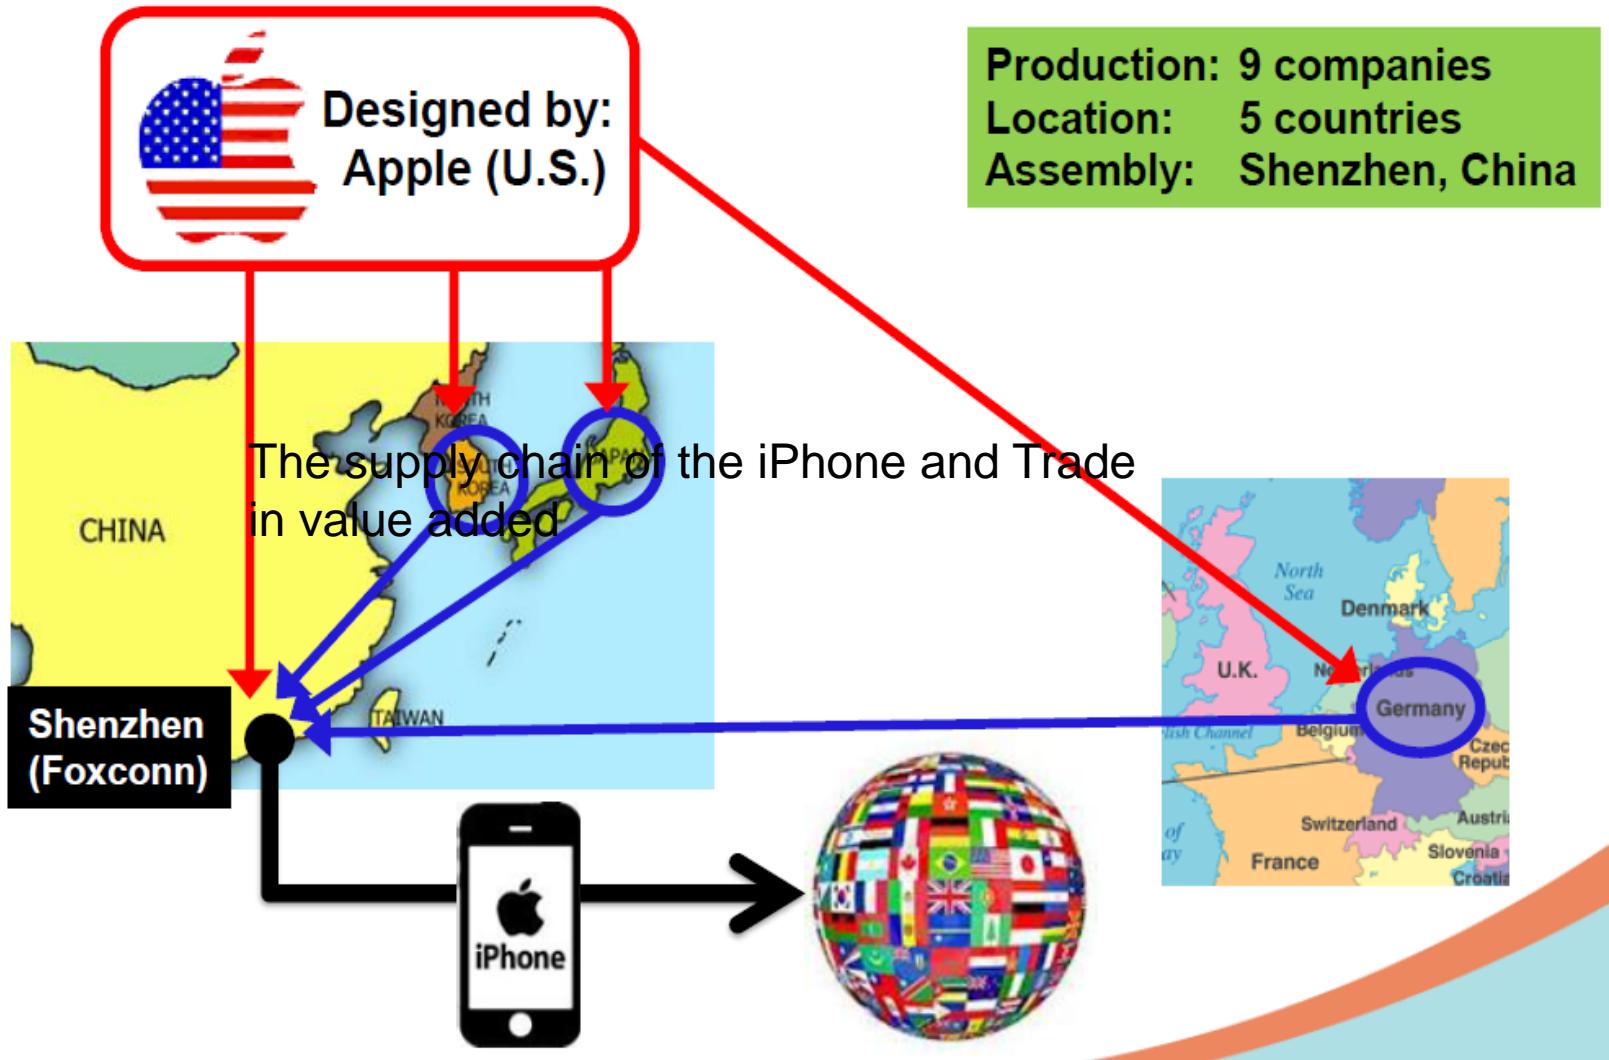

Intra Industry Trade; Variety/Intermediate Goods

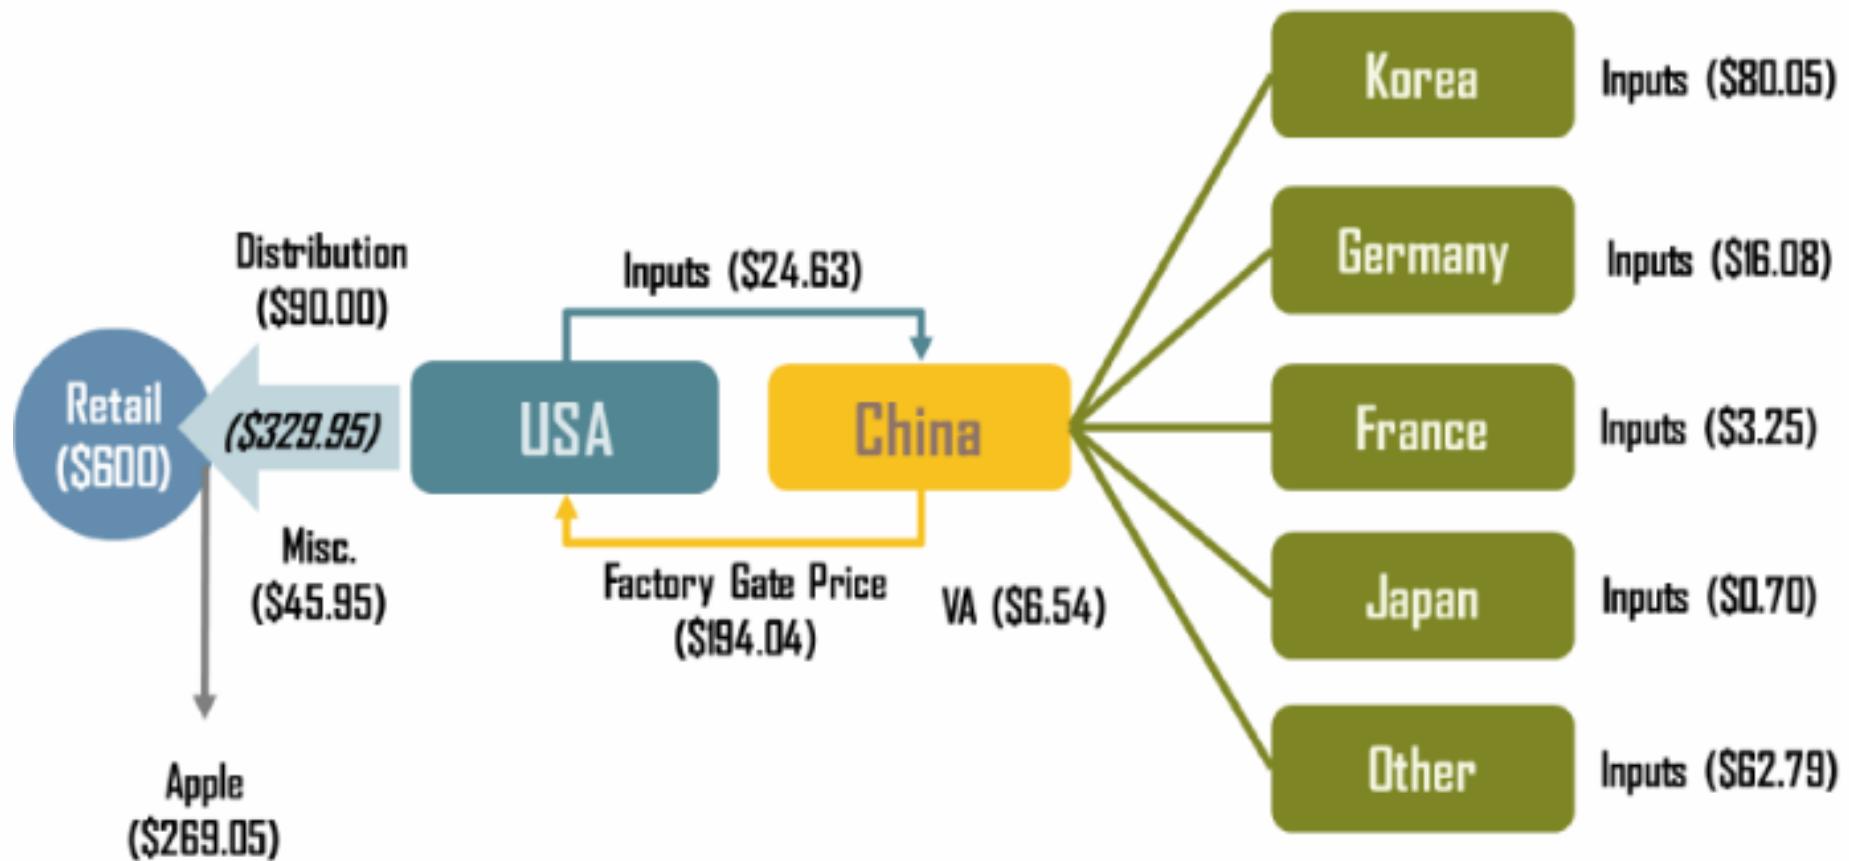

33

Example: Ford Fiesta Network

The supply chain of the iPhone and Trade in value added

The Global Value Chain for Apple's iPhone 4

Vagas de globalização

- 1^a vaga-*outsourcing** de sectores + custos decrescentes de transacção dos bens
- 2^a vaga-*offshoring*** de tarefas + custos decrescentes de expansão das ideias

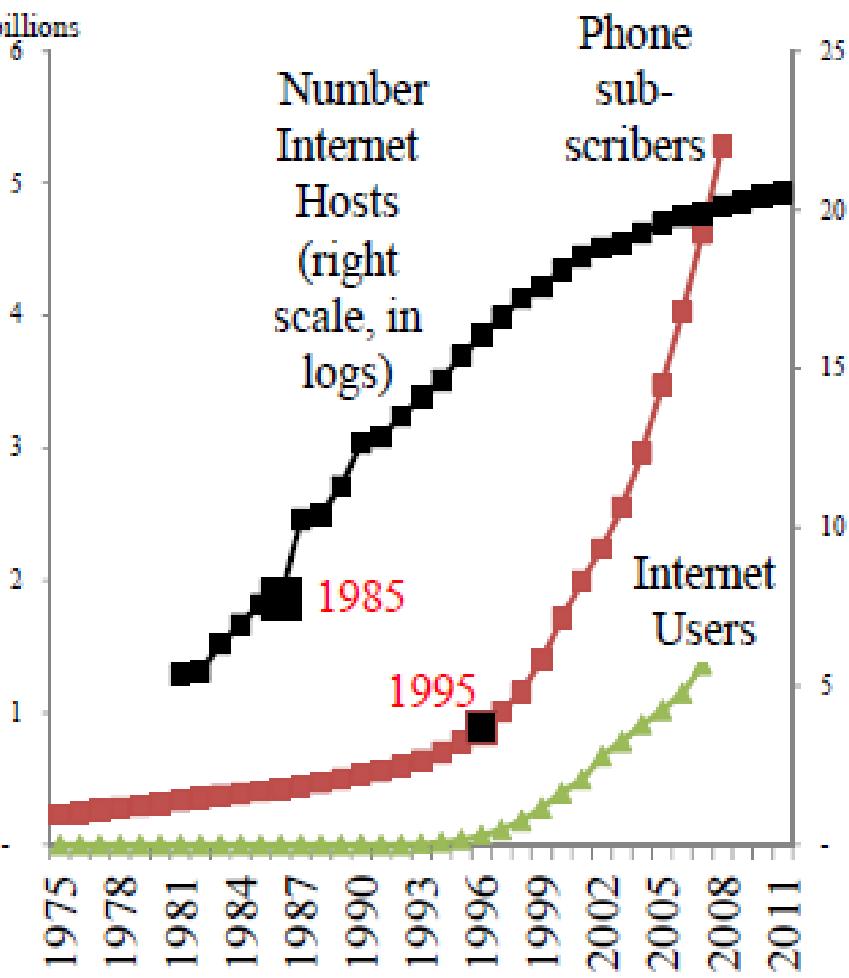

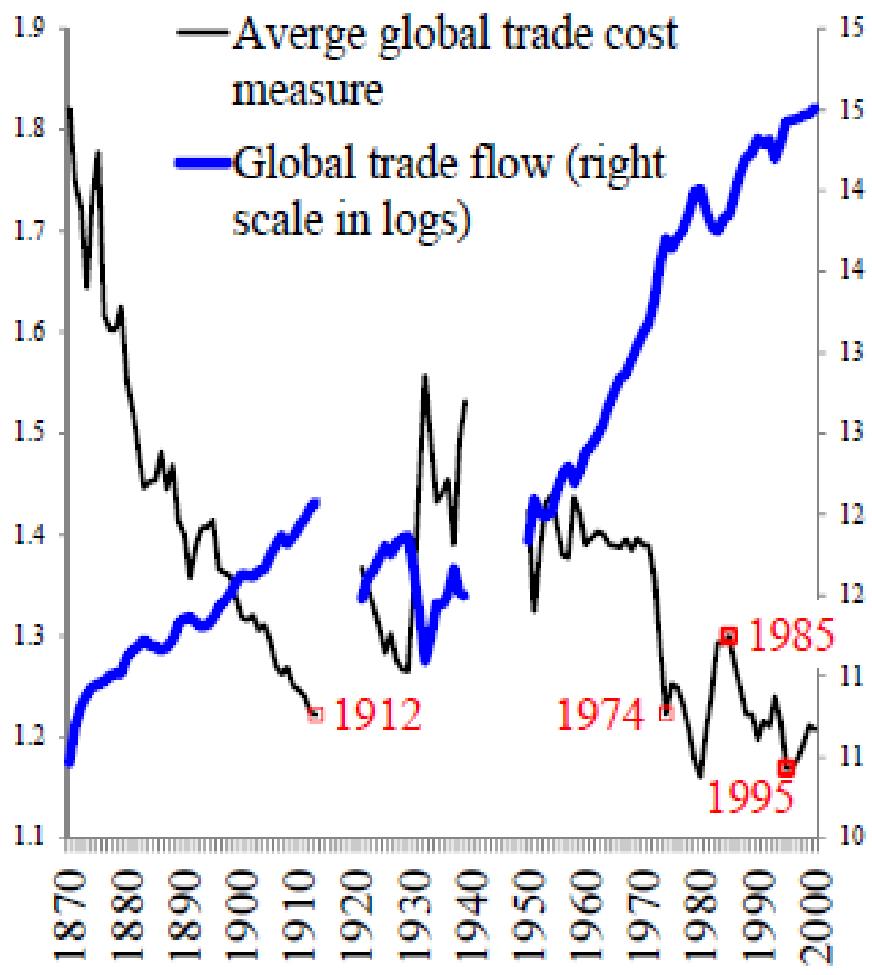

* across sectors

** across nations

1^a vaga de globalização

► 1850-1914

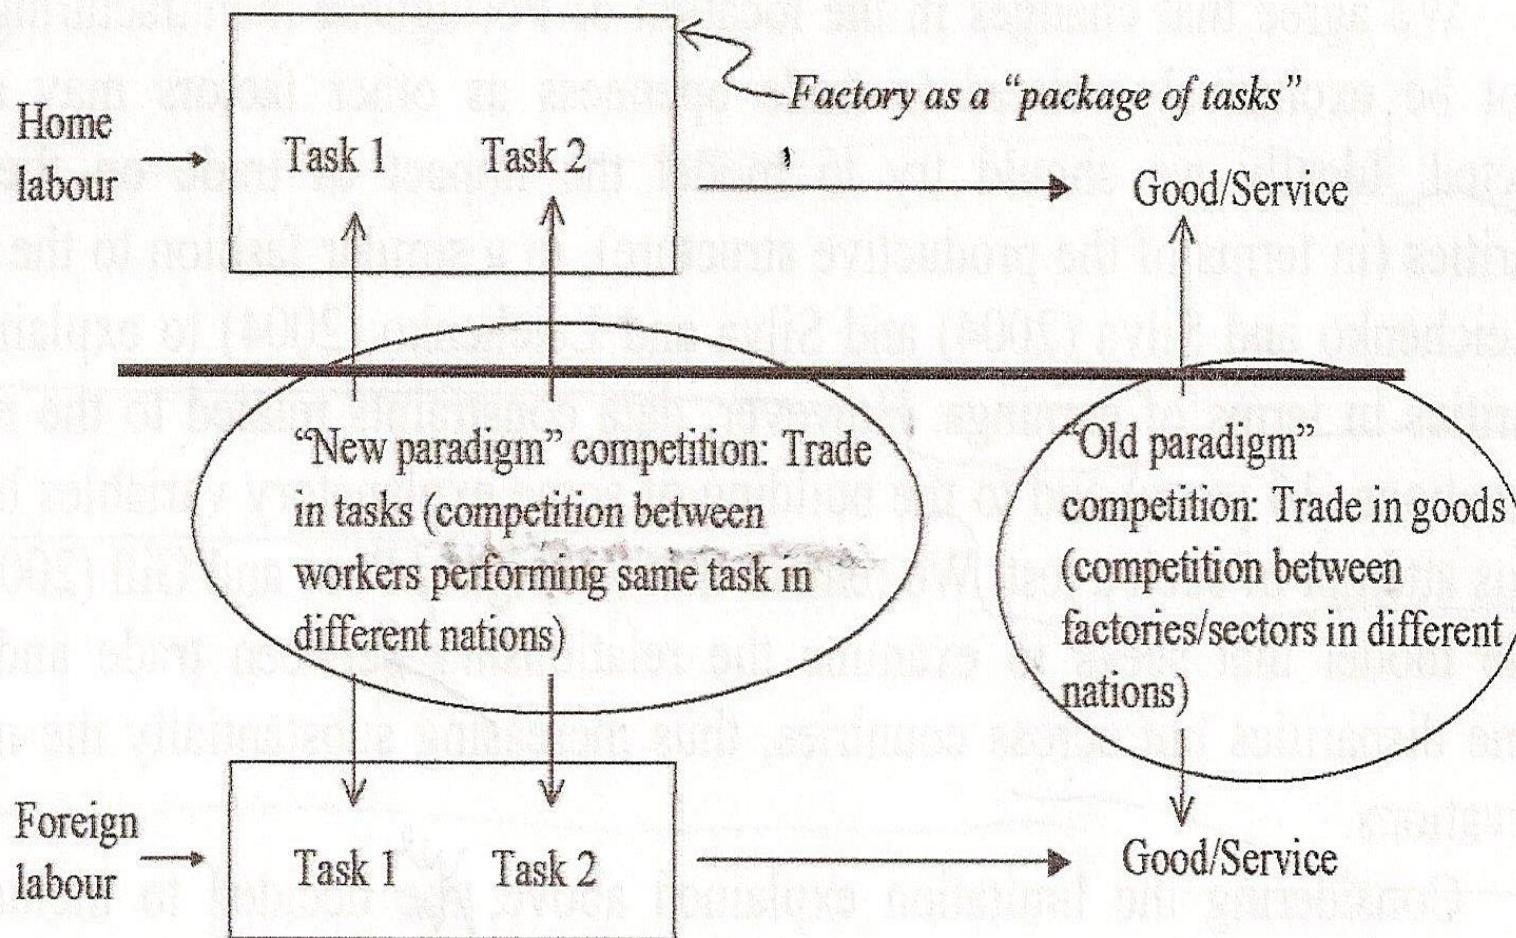

► 1960-...

Globalização: 2^a vaga

- Offshoring: The next industrial revolution? (Alan Blinder in Foreign Affairs, 2006)
- Gene Grossman of Princeton University: **The need of a new paradigm** (2006)

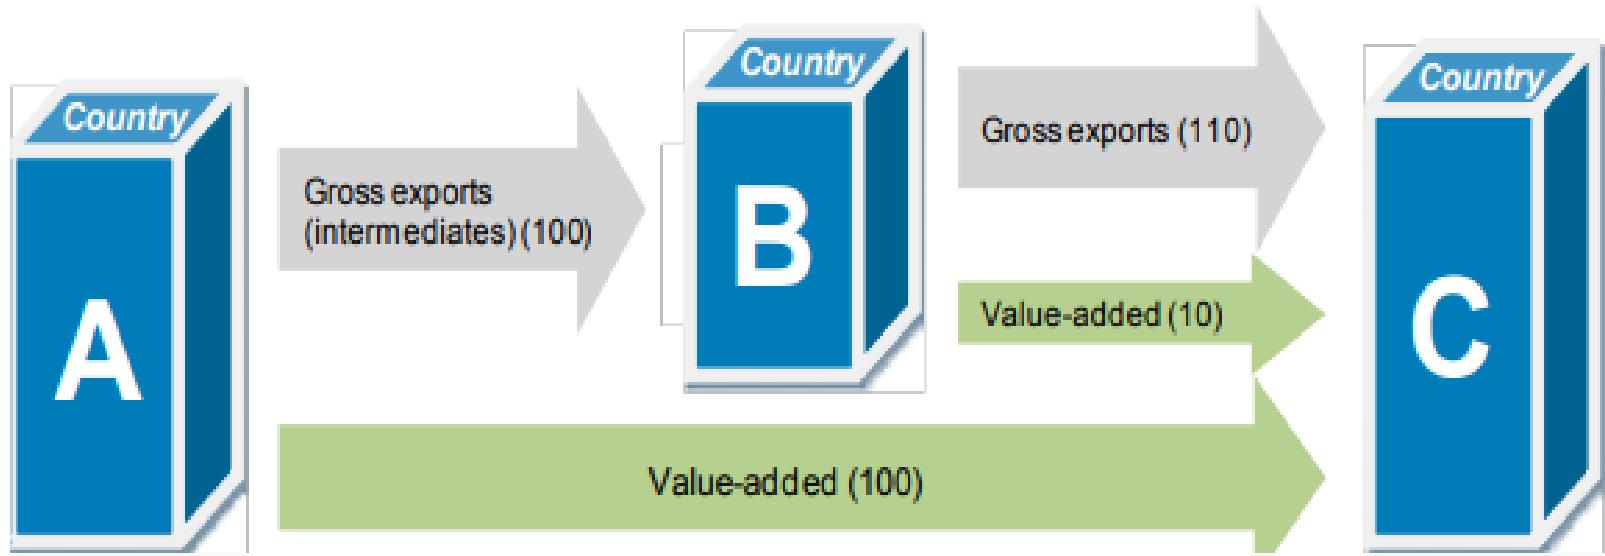

Figure 6 The first and second unbundling schematically.

A importância das CVG

- **80% do comércio mundial** - UNCTAD 2013
- Comércio de bens intermédios atualmente representa mais de metade dos bens importados pelas economias que compõem a OCDE e cerca de 75% das importações dos maiores países em desenvolvimento como China e Brasil

OCDE & OMC (2013)

“Made in one country”
“trade in goods”
“value of trade”

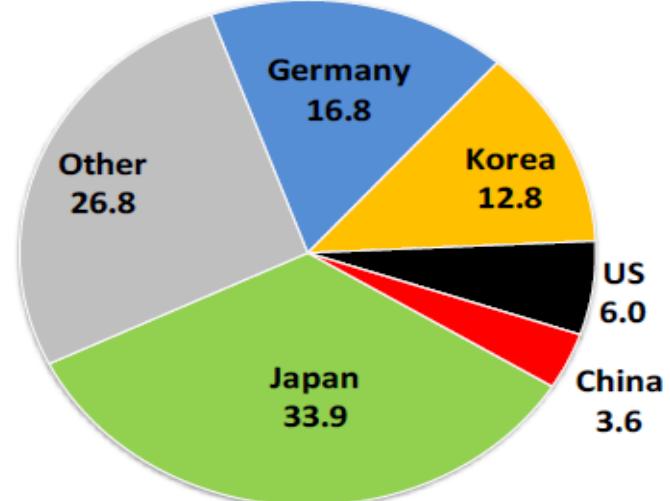

“Made in the world”
“trade in tasks”
“trade in value-added”

Table 1 . Apple iPhone 3G's Major Components and Cost Drivers

Manufacturer	Component	Cost (USD)
Toshiba (Japan)	Flash Memory	\$24.00
	Display Module	\$19.25
	Touch Screen	\$16.00
Samsung (Korea)	Application Processor	\$14.46
	SDRAM-Mobile DDR	\$8.50
Infineon (Germany)	Baseband	\$13.00
	Camera Module	\$9.55
	RF Transceiver	\$2.80
	GPS Receiver	\$2.25
	Power IC RF Function	\$1.25
Broadcom (USA)	Bluetooth/FM/WLAN	\$5.95
Numonyx (USA)	Memory MCP	\$3.65
Murata (Japan)	FEM	\$1.35
Dialog Semiconductor (Germany)	Power IC Application Processor Function	\$1.30
Cirrus Logic (USA)	Audio Codec	\$1.15
Rest of Bill of Materials		\$48.00
Total Bill of Materials		\$172.46
Manufacturing costs		\$6.50
Grand Total		\$178.96

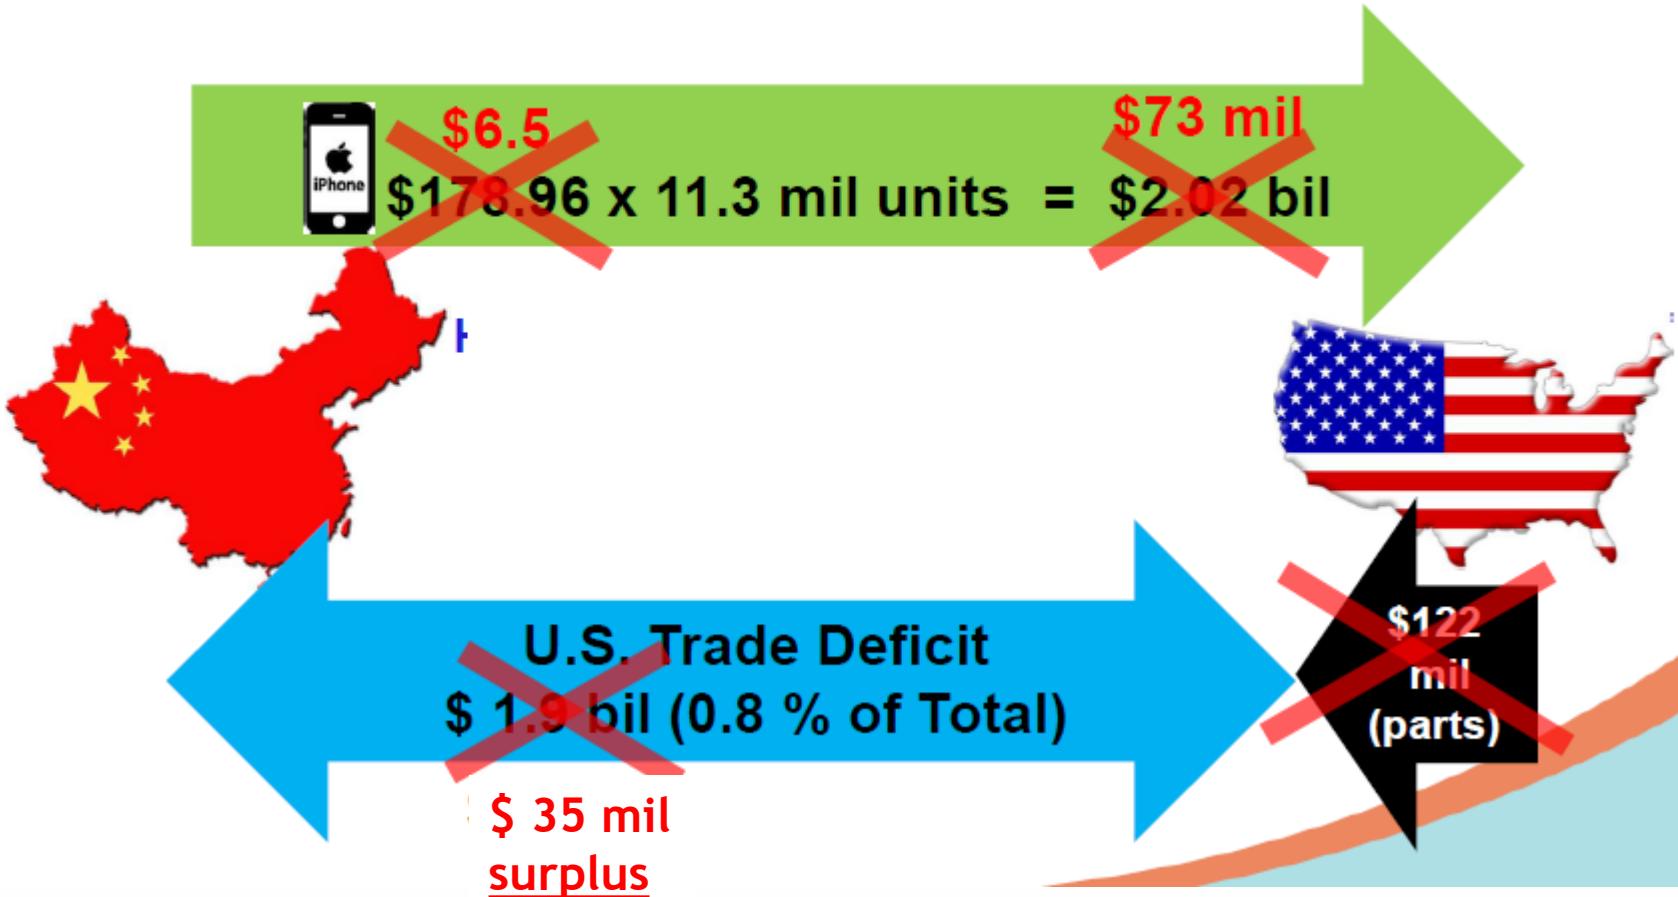

iPhone Manufacturing Cost Distribution by Country (%)

Source: Xing and Detert (2010)

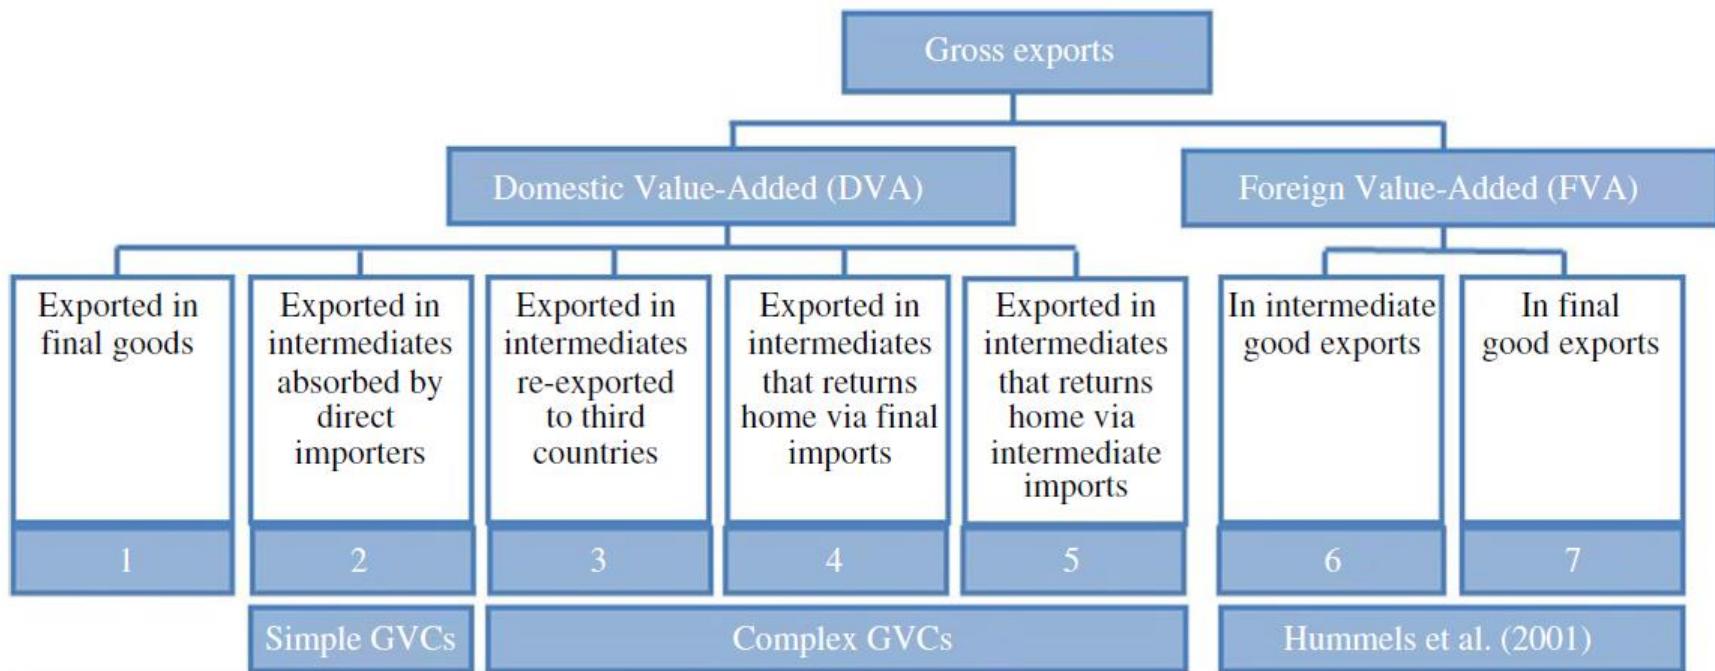

Chinese workers' contribution = \$6.5 (3.6% of Total Cost)

Current trade statistics greatly inflate China's exports and the Sino-US trade imbalance

AS ESTATÍSTICAS PARA MEDIÇÃO DE CADEIAS DE VALOR GLOBAIS

Metodologia	+	-
Estatísticas de comércio internacional em partes e componentes	<ul style="list-style-type: none"> Muito fáceis de obter e elevada comparabilidade internacional 	<ul style="list-style-type: none"> Apenas cobre bens, não serviços Qualidade depende no grau de desagregação das estatísticas Classificação nem sempre coincide com o uso efetuado (BI e BF) Não permite leituras de <i>second-round effects</i>
Estatísticas das alfândegas para bens em processamento	<ul style="list-style-type: none"> Mostram <i>second-round effects</i> Segue de perto a origem inicial do produto 	<ul style="list-style-type: none"> Disponíveis em poucos países, logo comparabilidade internacional é quase nula
Dados ao nível das firmas	<ul style="list-style-type: none"> Elevado grau de detalhe 	<ul style="list-style-type: none"> Dificuldade de obtenção (confidencialidade) Comparabilidade muito limitada

(recente) <u>Matrizes input-output ligadas com dados de comércio internacional</u>	<ul style="list-style-type: none"> Categoriza bens e serviços por uso efetivo, e não pela categoria Aplicações práticas muito amplas 	<ul style="list-style-type: none"> Apenas espaçadas no tempo (95, 00, 05, 09) Não mostram <i>second round effects</i>
--	--	---

Project	Institution	Data sources	Countries	Sectors	Years	Comments
World Input-Output Database (WIOD)	Consortium of 11 institutions led by Groningen University, EU funded	National Supply-Use tables	40	35	1995 to 2011	Based on official National Accounts statistics; uses end-use classification to allocate flows across partner countries; includes data on socioeconomic and environmental issues
Inter-Country-IO model	OECD-WTO, under the Made in the World Initiative (MIWI)	National IO tables	56	18	1995, 2000, 2005, 2008, and 2009	Based on national I-O tables harmonized by the OECD
Asian International IO tables	IDE-JETRO	National accounts and firm surveys	10	76	1975, 1980, 1985, 1990, 1995, 2000, 2005	US-Asia tables and also bilateral tables, including PRC-Japan
Global Trade Analysis Project	Purdue University	Contributions from individual researchers and organizations	129	57	2004, 2007	Unofficial dataset; includes data on areas such as energy volumes, land use, carbon dioxide emissions and international migration
Eora multi-region IO Database	Several Australian researchers, under funding by the Australian Research Council	National supply-use and IO data; plus data from Eurostat and United Nations	187	25-500, depending on the country	1990 to 2012	Still under improvement

REGIONAL NETWORKS

2000

2014

- From 2000 to 2014, the world's trade in value added has more than trebled and its geographical spread has become less unequal, with more countries and bilateral flows relevant for the GVCs.
- Patterns in the global production networks show a strong regional dimension and geographic borders play an important role.
- Without Germany, Factory Europe loses its pumping engine; the same for Asia without China and, in 2014, for the whole world, without the US.
- Emerging countries have intensified their positioning in the world trade network from 2000 to 2014, driven by upping the intensity of previous relationships with the key hubs.
